Geos Environment was founded in 1987 by the idea of its founders to provide the market a product in the engineer field aimed at the solution of problems related to ecology and environmental protection. And in particular active in the context of the treatment of industrial waste, the subsequent recovery and return to the market or disposal of the same, the remediation of contaminated sites, and in the waste water management services. Subsequently, following the increasingly urgent market demand, such activities of engineering and consulting flew into a more broad business organization that saw the Geos Environment become a real company operating in the field of environmental protection and the recovery/production of energy from alternative source.
